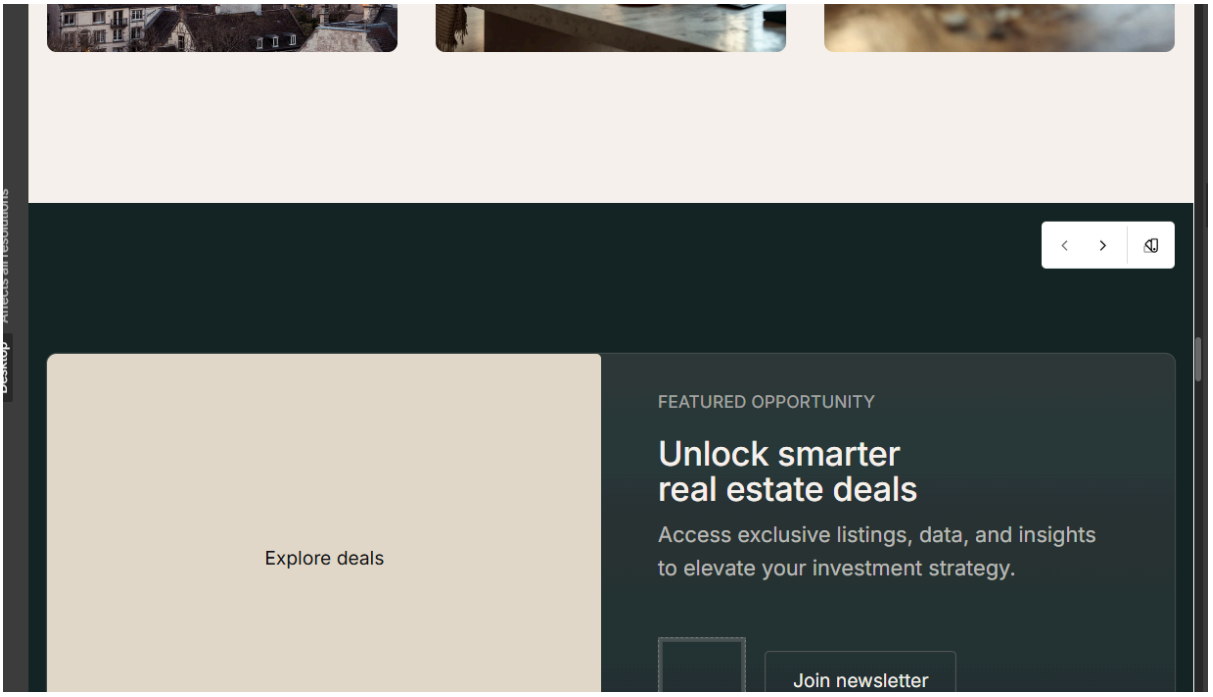
Feedback Hofman horizon
General Lay-out:
Header to big
Work with the coloring in this image: Dont look at the text, but that Blue/green/gray incombination with the beige color from the box and the white/creme . I think that's a nice color combination. But maybe send example before putting it everywhere.



Hoofdpagina
Remove capitals only beginning of sentences
No black letters if Needed grey

Hofman Horizon (only H Capital)
Logo - horizon arch wider just like the example we sent. And then use the green/blue/grayish color from the previous image for the below stripe under hofman horizon.
Montserrat is the lettery type.

HOFMAN HORIZON H

Montserrat

And the Mission statement : “our mission is to make sure you invest with clarity, not guesswork”

Instead of the two buttons (start invesment analysis & explore globak market), have like these: Got a propery? Analyze it
Need a property? Find one

For the got a property? Analyze it, keep the redirection to the calculator, but now it automatically goes to portugal, customer should be able to choose country.
——
Core objective = Our mission

solving data fragmentation = connecting the dots in real estate investing

Replace current subheader with: Real estate data is fragmented across platforms, tax systems, and local markets. We unify it into one clear, reliable source of truth.

Remove integrated european data engine
And repace with:
Everything you need to invest smarter
Checkbox (current icon is fine): - analyze your property (link to calculator) - discover properties (link to all properties) - stay a head of the market (link to newsletter subscription)

Remove data response time & markets and replace with process flow. Replace with Process steps with arrows on the right - can be a bit playfull, (4 steps from finding a property to the first rent)

——
Choose Your Destination = Choose your location (only first letter from Choose with capital)

Per country container:
Replace investors = average appreciation
Add small box available properties

Open market portal = Discover Portugal

——-
Replacedata that drives dexlcisions to Data you can trust:
Replace current 3 sections/titles with: • Data-driven rent estimates based on 10 + data points
Validated by local real estate experts for accuracy
Smarter than generic tools — includes taxes, fees, and regional costs

——
Page after you clico on discover country

Copy for all regions:
Portugal market analysis Dashboard = Discover Portugal
Remove on top star institutional market leader
Remove capitals and no . At the end
Statement: “Explore regional non biased market insights, transparant return calculations and costs.”
Change market growth box to avg. appreciation and again available properties instead of active listings/
Button view local listings = view all properties
———-
Delete Market granularity box and
area-specific insights as header (remove Portugal -> region matrix)
Discover our selected areas below to find the best property investments and to calculate transparant returns (also on this page below: Replacedata that drives dexlcisions to Data you can trust:
Replace current 3 sections/titles with: • Data-driven rent estimates based on 10 + data points
Validated by local real estate experts for accuracy
Smarter than generic tools — includes taxes, fees, and regional costs)

Per region Total 4 information boxes:
Avg yield + avg appreciation + available properties + vacancy

run regional calculation = “check my potential investment”

View segment listings = Browse properties
—- click through on browse properties = remove little box: institutional market access Top yield asset inventory = Homes that generate income
Subline: “Browse properties with rental potential, returns and investment insights.”

Remove access off-market pipeline sectoion below on the page.

On every listing you should see the gross yield instead of horizon yield. And instead of calculate net profit , do calculate net profit and forecast . And if you click through on the property. You should also see the gross yield, possibility to calculate net profit, possibilty to

calculate, cash roi, and 20 year forecast. Add those under the listing like in an order, and if you click on it you get redirected to the good calculator page (eventually with everything filled in already)

Remove every asset undergoes a 48 point verification section everywhere

Calculator page:

Client must be able to chose a counntry and then region and then neighboorhood
. Then they fill in the buying price, and for simple version only bedrooms, swuared meter. For advanced version: they have extra, year built, what kind of finishing (bad, normal, good, premium) balcony, yes/no, parking included yes/no, energy label, elevator yes/no/not applicable

And then out of that calculation it gives the expected market rent, which decides the gross yield calculation, so first stage is to estimate rental price. Then second phase to calculate gross yield.
